

By means of the license agreement on the assignment of the right of use of trademarks enterprise \_\_\_\_\_ offers legal entities and individuals to use as Licensees trademarks GRABOVOI® and GRIGORI GRABOVOI®. The aim of use of the signs is the eternal development of each concrete man and humanity as a whole; therefore the technologies, which will be distributed under **class 9**, are ideologically oriented to realization of the eternal development.

With the assignment of the right of use of trademarks the Licensee is provided with training course on the Teachings of Grigori Grabovoi that enables the Licensee to conduct his activity on the basis of technologies of the eternal development. Individual technologies for the Licensee can be created after signing of amendments to the license agreements.

The rights of the use of trademarks on the following goods and the services are granted:

Devices for recording, transfer or reproduction of sound or images; magnetic data carriers, disks of audio recording; vending machines and mechanisms for devices with advanced payment; cash registers, calculators, processing equipment and computers; fire extinguishing equipment; the programs of data processing; recorded and disregarded carriers of data of all forms, in particular, CDs, MD, DVD- disks, video cassette and audio cassette.

**- Recorders**

In this class from the point of view of sale of these devices the component of reliability of the devices will be increased in accordance with the fact that in line with the Teachings of Grigori Grabovoi the technologies of the eternal development realize those material systems of the object of constructions, which possess additional properties of reliability as the minimum, and generally speaking are directed toward the eternal development, they accordingly have a number of additional properties the same as during recording. This is recording into the specialized archives of information, which contain not just the data base, but also contain specific recommendations directed to the eternal development on the basis of concrete events of the record.

**- Transfer or reproduction of sound or images.**

With the transfer of sound and image it is possible to use patent “The system of transfer of information” No **2163419** of 06.07.2000. With the use of this sign it is possible to develop create devices, which make transfer of information obligatory that will be realized in all cases and transferred with the required accuracy and direct towards the eternal development.

**- Reproduction of sound or images.**

In term of reproduction of sound and image the idea refers to the sound reproduction, which possesses characteristics of directing towards the eternal development, in other words, strictly speaking, the structures which do not interfere with the sound but anyway direct to the eternal development will be added. The same refers to image. Mechanisms of development of forms, which generate elements of the eternal development in interaction with the perception of man, will be introduced into the image.

**- Magnetic data carriers, sound recording disks.** Besides the usual magnetic carriers of data and sound recording disks there will be the carriers, which contain additional points of archive backup, which are not destroyed with the destruction of the magnetic carrier. The same relates to the sound recording disks.

**- Vending machines and mechanisms for devices with advanced payment.**

For these elements, such as vending machines and mechanisms for devices with advanced payment, the principles of voluntary dealing through these automatic machines and mechanisms of payment of voluntary deduction to the structure of the eternal development will be realized, this means that data of the funds, which deal exactly with the eternal development will be input; therefore these devices and vending machines will differ. Due to this, reliability of this equipment will increase, and their connection with the general system of transfer of funds towards the eternal development increases. This will be completely voluntarily; a man can use and can refuse. Vending machines and devices of leading companies will be used. In this case if vending machines sell foodstuff additional systems of control of quality will be introduced. The same way additional system of control related to the reliability of those goods, which will be sold through the vending machines, will be introduced.

**- Cash registers, calculators, processing equipment and computers.**

In this case the cash register will be provided with the systems of blocking of the register with special remote methods, in case of availability of cash in the cash register. And at the owner's request additional functions of output to the information network systems, which will facilitate bookkeeping and other accountability reporting, will be introduced. The same refers to calculators in relation to received cash. If it is necessary to read some systems, for example, to calculate scientific ones, to use programs for calculations. Then in this case the sources of the most active systems of calculation with the minimum time and with the use of the highest speed equipment will be used.

The same way as speed is of comparably high value in the systems of the eternal development, exactly the same is the logic and practice of introduction of other purposeful systems of the eternal development. Processing equipment and computers will comprise the system of the eternal development that will have statistics on collection of data referring to the elements of the eternal development; the system will issue recommendations on the basis of processed data only on the person's request, and the computers will comprise systems, which are actually built-in programs being related to specific technologies and systems of the eternal development available from the materials on the Teachings of Grigori Grabovoi.

**- Fire extinguishing equipment.**

It will be based on the most contemporary technologies of fires prevention.

**- The programs of data processing.**

These will be the contemporary programs, which will consider possible interrelations between different system developments and different systems, such as, for example, Macintosh, Windows, etc. In other words, these are programs, which are capable of processing any data irrespective of their origin, and in such a way that the data will provide the structure specifically expressed in numbers, in specific technologies on the eternal development. These subprograms will be included as standard ones and might be provided on request. Thus, exactly the ideas of general education course will be distributed, from which man can obtain the knowledge of the eternal development actually also at the level of those service programs, which are used as entertaining. In this case they will be released under the sign of GRABOVOI® and GRIGORI GRABOVOI® and sold the same way as presented already in the same catalog and, quite possible for entertainment, for any other needs of the user, however they will be marked out exactly in that part that will describe that they are directed to realize exactly the eternal development as a result of their use. In this case it will be mentioned that these products goods, actually realize the eternal development, but do not plan to realize; in other words

each action is exactly the process of realization. Everything is real. Just as goods and services, which are described by concrete signs, are real.

**- The recorded and unaccounted carriers of data of all forms, in particular, CDs, MD, DVD- disks, video cassettes and audiocassettes.**

This refers to the sale of various data carriers including CDs, MD, DVD- disks, video cassettes and audiocassettes, which will also have embedded properties of additional reliability, that mean exactly introductions of technologies of the eternal development, where with the eternal development things must have, as a matter of fact, multilevel status of backup reliability. Well, as if they are eternal; in other words, a man can forego the thing only if he wishes to, but not because it, for example, was broken. Such trend should be included in the ideology, that is to say, the thing, which could not be broken, could not be worn out. And in this connection these properties will be introduced into the data carrier, these are additional systems of rigidity, even through it requires cost increase, they will be sold.

It is important here that there will be subdirectories of catalog 9. Subdirectory, which is called recorded and unaccounted carriers of data of all forms, in particular CDs, MD, DVD- disks, video cassette and audiocassettes. Here a minimum educational course will be also sold; an average one will also be presented, and in case the future capacities of these physical carriers make it possible, extended educational course on technologies of the eternal development as well. Furthermore these systems will have built-in microprocessor levels working from the external energy level, but not due to the storage batteries; these systems can also enter network constructions provided the user permitted.

Licensee with the use of class of 9 trademarks can obtain also rights to the use of methods, devices and systems described in the patents for inventions “The Method for Prevention of Catastrophes and the Device for its Realization” and “The System of Transfer of Information”.
